

What Makes Radiance An Ideal Solution?

The key element of Radiance is identical to the chemical structure of calcium naturally present in the human body. Radiance remains soft and flexible and is exceptionally compatible with the body. Typically, only one treatment is sufficient because Radiance is not absorbed by your body and is long lasting. Radiance does not cause any allergic reaction nor does it paralyze or act on facial muscles. Best of all, it produces results immediately that last three to five years or longer without repetitive treatments.

What Are Radiance Treatments Like?

Treatments are performed at your doctor's office and take only about fifteen minutes. Since Radiance is an injectible there is no surgery and only a small amount of anesthetic is needed. The Radiance is then injected into the selected area by a tiny needle (specifically designed for cosmetic procedures) just under the skin producing results that are immediately visible.

How Will I Feel And Look After Treatment?

You can comfortably return to your normal activities after your treatment. Side effects are rare and any minor swelling or redness from the injection can be covered with make-up and usually disappears within one to two days. You can immediately expect greatly improved wrinkles, enhanced lips, or smoothed-out depressed scars.
